

1      CLAIMS

2

3      What is claimed is:

4

5      1.      An adjusting device for installing a manhole ring onto a manhole, the manhole  
6      ring having an annular inner shoulder, the adjusting device comprising:

7              a center plate;  
8              at least one supporting arm having a first end and a second end, the first end  
9              securable to the center plate; and  
10             a securement assembly associated with the center plate for releasably holding the  
11             manhole ring.

12

13      2.      The adjusting device of claim 1 and further comprising  
14             a first supporting arm having a first end and a second end, the first end of the first  
15             supporting arm securable to the center plate;  
16             a second supporting arm having a first end and a second end, the first end of the  
17             second supporting arm securable to the center plate; and  
18             a third supporting arm having a first end and a second end, the first end of the  
19             third supporting arm securable to the center plate;  
20             wherein the first ends of the first supporting arm, the second supporting arm, and  
21             the third supporting arm is fixedly secured to the center plate, the angle  
22             between the first supporting arm and the second supporting arm being  
23             approximately sixty (60°) degrees, the angle between the second  
24             supporting arm and the third supporting arm being approximately sixty  
25             (60°) degrees, and the angle between the third supporting arm and the first  
26             supporting arm being approximately sixty (60°) degrees.

27

28      3.      The adjusting device of claim 1 wherein the center plate includes a first center  
29      plate and a second center plate, the first supporting arm, the second supporting arm, and

1 the third supporting arm pivotally secured between the first center plate and the second  
2 center plate.

3

4 4. The adjusting device of claim 3 and further comprising:  
5 at least one removable fastening mechanism for each supporting arm thereby  
6 allowing rotation of the supporting arms relative to the first center plate  
7 and the second center plate.

8

9 5. The adjusting device of claim 1 wherein the securement assembly includes an  
10 extension member on each supporting arm and a clamping member, the clamping  
11 member movable relative to the center plate, wherein the extension members are  
12 contactable with the annular inner shoulder of the manhole ring and the clamping member  
13 is positionable beneath the annular inner shoulder of the manhole ring thereby releasably  
14 securing the manhole ring between the extension members and the clamping member.

15

16 6. The adjusting device of claim 5 and further comprising:  
17 a threaded rod between the clamping member and the center plate.

18

19 7. The adjusting device of claim 5 wherein each extension member has an adjustable  
20 height.

21

22 8. The adjusting device of claim 1 and further comprising:  
23 a first leg secured to the second end of the first supporting arm;  
24 a first supporting plate secured to the first leg;  
25 a second leg secured to the second end of the second supporting arm;  
26 a second supporting plate secured to the second leg;  
27 a third leg secured to the second end of the third supporting arm; and  
28 a third supporting plate secured to the third leg.

29

1 9. The adjusting device of claim 1 wherein the second ends of the first supporting  
2 arm, the second supporting arm, and the third supporting arm are bent at an angle of  
3 approximately ninety (90°) degrees, and further comprising:

4 a first supporting plate secured to the second end of the first supporting arm;  
5 a second supporting plate secured to the second end of the second supporting arm;  
6 and  
7 a third supporting plate secured to the second end of the third supporting arm.  
8

9 10. A method for installing a manhole ring onto a manhole, the manhole ring having  
10 an annular inner shoulder, the method comprising:

11 providing at least one extension member;  
12 providing a clamping member;  
13 positioning the extension member on the annular inner shoulder of the manhole  
14 ring;

15 positioning the clamping member under the annular inner shoulder of the manhole  
16 ring;

17 clamping the annular inner shoulder of the manhole ring between the extension  
18 member and the clamping member;

19 positioning the manhole ring upon the manhole; and  
20 unclamping the manhole ring.

21  
22 11. The method of claim 10 and further comprising:

23 adjusting the extension member in position on the annular inner shoulder of the  
24 manhole ring.

25  
26 12. The method of claim 10 and further comprising:

27 adjusting the clamping member under the annular inner shoulder of the manhole  
28 ring.

1 13. The method of claim 10 and further comprising:  
2 providing three extension members.  
3  
4 14. The method of claim 10 and further comprising:  
5 pouring concrete around the outside of the manhole ring.  
6  
7 15. An assembly for installing a manhole ring onto a manhole, the manhole ring  
8 having an annular inner shoulder, the assembly comprising:  
9 adjusting means for adjusting the position of the manhole ring;  
10 support means secured to the adjusting means for supporting the manhole ring;  
11 and  
12 security means secured to the adjusting means for securing the manhole ring.  
13  
14 16. The assembly of claim 15 wherein the adjusting means is a center plate.  
15  
16 17. The assembly of claim 15 wherein the support means is a first supporting arm, a  
17 second supporting arm, and a third supporting arm.  
18  
19 18. The assembly of claim 17 wherein the first supporting arm, the second supporting  
20 arm, and the third supporting arm are fixedly secured to the center plate, the angle  
21 between the first supporting arm and the second supporting arm being approximately  
22 sixty (60°) degrees, the angle between the second supporting arm and the third supporting  
23 arm being approximately sixty (60°) degrees, and the angle between the third supporting  
24 arm and the first supporting arm being approximately sixty (60°) degrees.  
25  
26 19. The assembly of claim 17 wherein the center plate includes a first center plate and  
27 a second center plate, the first supporting arm, the second supporting arm, and the third  
28 supporting arm pivotally secured between the first center plate and the second center  
29 plate.

1

2 20. The assembly of claim 15 wherein the securement means includes an extension  
3 member on each supporting arm and a clamping member, the clamping member movable  
4 relative to the center plate whereby the manhole ring is securable between the extension  
5 members and the clamping member.
